

What Makes Dental Implants A Good Choice

Strength

Implants are the strongest option next to natural teeth

Implants are stable and function like normal teeth

Bone Retention

Absence of teeth can lead to bone deterioration and bone loss in the jaw

Implants help preserve bone and even stimulate bone growth

Aesthetics

Replaces missing teeth which can make you self-conscious

Helps your face retain its shape, while missing teeth can cause sinking

Comfort

Implants are a part of you, unlike dentures which can slip and move around

Eat, speak, smile, and laugh without feeling worried about your teeth

Success Rate

Implants have a success rate as high as 98%

If you take good care of your implants they could last a lifetime
