13-18 years

The teenage years can be an exciting and challenging time as your child grows toward adulthood. Teens should be seen annually for well visits, and our office extends these visits by 15 minutes to allow your child time to discuss concerns alone with their physician if they desire . At these visits we continue to provide a physical exam, assessment of growth and development and anticipatory guidance. We also monitor physical, emotional, social and academic development. All teenagers will be given a short survey to screen for depression. In addition to their annual Flu vaccine, your teen may be given vaccines to protect against Meningococcus and Human Papilloma Virus (if not already completed). School forms will be filled out free of charge at each of your child's well visits. Camp or sports forms should be brought in at this time as well. At this visit:

- Full physical exam
- Assessment of growth and development
- PHQ-9 depression screen
- Anticipatory guidance on topics including diet, exercise and safety
- Vision and blood pressure screening annually
- Routine lab work if indicated, including a urine screen for those 16 and older
- Immunizations - [Meningococcus ACWY](#), [Meningococcus B](#), and [HPV](#) if not completed ([Flu](#) if indicated)
