

## I am going in the HBOT!

1. I am receiving hyperbaric oxygen therapy today, we call this HBOT for short. I will go to the Clinic for Special Children for this therapy

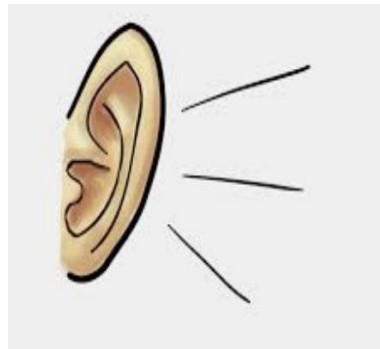

2. The HBOT room is a large room with a chamber inside. This chamber looks a lot of like submarine or spaceship

3. I will be given a walkie-talkie so that my parents, a staff member, and I can talk while I am inside the chamber. I will learn how to work the walkie-talkie before going inside the chamber.

4. While inside the chamber, my ears may pop. I will be shown now to hold my breath to prevent my ears from feeling funny.

5. Now it is time to go inside the chamber. I do not need to be afraid. My parents can even come inside with me if I want them to! I can watch videos, listen to music, and even take a nap during the therapy.

6. I am all done with my HBOT therapy. This will allow my body to heal and feel better. Everyone is proud of me from being brave and cooperative.
