Skin rejuvenation can be accomplished in numerous different ways and approaches.

On a basic level, sun protection and tretinoin such as altreno® can be used to slow and possibly reverse some effects of photo aging. Anteaage® is another way to increase collagen, enhance healing, and rejuvenate the skin. Slightly more aggressive interventions include mild chemical peels which even dyspigmentation and provide a more youthful look.

-Going a step further, which also means more dramatic results, IPL/BBL (intense pulsed light) in concert with radio-frequency therapy may be used (ELOS). This works by heating the collagen to stimulate tightening, reduce brown spots, and remove vascular changes including blood vessels.

- **Venus Legacy®** takes skin tightening to the next level by increasing bulk heating of collagen.

-**Bellafill®** is an interesting option as the only long term filler.

-If marked facial scarring, **medium depth chemical peel** or **non-ablative 1540nm and/or ablative 2940nm or DUAL LASER THERAPY**. While more downtime, these have the most dramatic results treating medium to severe depth wrinkles and scarring.

Step One: From a cost to benefit approach, nothing comes close to daily sun protection. Sun damage is a major player!

Step Two: Topical retinoids. **Altreno®** for fine lines, mottled pigment, and tactile roughness.

Step Three: **Anteaage** NON-Inflammatory Growth Factors <https://anteage.com>

Step Four:

1) **FotoFacialRF® IPL/BBL**

FOTOFACIAL SRA or SR & ST Syneron

<https://candelamedical.com/na/provider/product/elos-plus>
Minimally invasive and no down time -Easily repeated -Response improves with each treatment -ELOS technology has secondary skin tightening effect-Reduces brown spots -Reduces "age spots" -Reduces melasma -Reduces freckling -Reduces erythema (redness) -Telangiectasias (blood vessels)

2)* **Palomar MAX G with 1540nm LASER***

This addresses pigment, wrinkles, and scars

www.threeforme.com

www.cynosure.com/product/palomar-icon-aesthetic-system

Advantages of MAX G and 1540 nm is minimal downtime and also reducing wrinkles, scars, and pigment!!! \$675/session

Step Five: Medium Depth Chemical Peel

- 1) More effective at treating moderate wrinkles and scars.
- 2) Downtime (4-9 days)
- 3) Does require a few days off work.
- 4) Over 100 years use
- 5) Face: \$550

Step Six: "LIQUID FACE LIFT" Bellafill®

is approved for acne scarring and nasolabial folds. However, it has been used to give volumization back to the face.

www.bellafill.com The 5 pack is designed to fill lost tissue volume due to aging. On average, 5 syringes per decade after age 30. Typically, the 5 pack kit will reduce one's appearance of aging by 5 to 10 years by replacing lost volume.

STEP SEVEN: RHACollection.com

RHA is the most natural and elegant hyaluronic acid on the market for fine lines, lips, and deeper defects. THE MOST ELEGANT FILLER of 2021!

Step EIGHT: VENUS LEGACY

www.venustreatments.com/venus-legacy

More effective than ST therapy ReFirme(skin tightening) device (700-2000nm & RF)

- 1) Use on numerous areas of the body:face /neck/chest/abdomen/thighs/buttocks/flank
- 2) Can be used in combination of Kybella, ST therapy, and 1540 nm laser
- 3) Can be rotated with **QWO**

www.qwo.com 1st cellulite injectable

STEP NINE: ABLATIVE AND NON-ABLATIVE THERAPY OPTIONS

1540nm and/or 2940 nm

Fractionated laser therapy is one of the most aggressive options for severe scarring/wrinkles.

- 1 Most effective for diffuse scarring
- 2 Some downtime 7-10 days

3 Higher expense but more impact & results
4 Fractionation allows for faster healing

www.cynosure.com/product/palomar-icon-aesthetic-system

1540 alone:non-ablative so mild erythema and mild peeling minimal downtime (stretch marks,scars,tightening,wrinkles)

2940 alone: ablative: most effective for diffuse fine wrinkles and superficial scarring/texture changes 5 - 8 days downtime (surface changes and upper dermis)

1540 nm with 2940nm same day: allows for more tightening, deep penetration, and full fractionated resurfacing 7- 14 days downtime

STEP TEN: TRUSCULPT FLEX©

-Get muscles back with functional tightening and definition: thighs, buttocks, abdomen

-Better than Emtone© or Cooltone© especially with functional muscle.

<https://trusculpt.com/muscle-sculpting>

STEP ELEVEN: TRUSCULPT ID©

-Kills the Fat and Tightens the skin.

-Better than Coolsculpting© and SculpSure©

Kills fat on abdomen, flanks, neck, bra fat, inner arms and thighs!

<https://trusculpt.com/fat-reduction>

www.trusculpt.com

STEP ELEVEN: KYBELLA©

-effective way to kill neck fat

-swelling for 1-2 weeks after therapy

-injectable (can be repeated in 2-3 months)

-more swelling than Trusculpt ID but good alternative option to Trusculpt ID

www.mykybella.com
