

Welcome to Mini Dental Implant Centers of America

Our focus is providing you with the revolutionary benefits of mini dental implant dentistry. This unique approach to modern dentistry offers new opportunities for individuals who have lost one or more teeth. For the first time, we can replace missing teeth with implant supported, cemented and/or removable restorations in as little as one visit... each without the complications of major oral surgery and long healing times.

How are Mini Dental Implants Different From Conventional Implants - 7 Times LESS

- 1. LESS EXPENSIVE**
In many cases, mini implants cost around half the cost of traditional or conventional implants.
 - 2. LESS INVASIVE**
Because the mini implant requires only a small pilot hole to be placed, it is less traumatic to the bone and soft tissue; as compared to a traditional conventional implant that usually involves extensive surgery and bone grafts.
 - 3. LESS HEALING TIME**
Because placing the smaller diameter mini implant does not cause as much trauma to the bone and soft tissue in the mouth, your healing time is reduced from months to days.
 - 4. LESS DISCOMFORT**
Less trauma to the gums, bone and underlying tissue means less discomfort. Many patients need only over the counter pain medication for a day or so after the procedure.
 - 5. LESS RESTORATIVE TIME**
In many cases, the mini implant can be loaded immediately after placement. This means that most procedures, including anchoring dentures can be done in one visit.
 - 6. LESS BONE LOSS**
A mini dental implant preserves the bone so that you can preserve the shape of your face.
 - 7. LESS BONE REQUIRED**
Mini implants require less bone so you're less likely to need additional costly bone grafts.

How Successful are Small Diameter Implants: A Literature Review 2012
Dr. Keyvan Scharbi, Harvard School of Dental Medicine, Boston, MA, Clin. Oral Impl. Res. 0, 2012 / 1-11
- Conclusion:**
Survival rates reported for SDI are SIMILAR to those reported for STANDARD width implants. SDIs could be considered for use with FIXED restorations and mandibular overdentures, since their SUCCESS RATE appears to be COMPARABLE to that of regular diameter implants. They might also be an efficient, low-cost solution for elders who wish to reduce problems with denture instability.

Tired of wearing dentures?

Are you tired of struggling with loose dentures? With mini dental implants, we can stabilize your dentures; and with support that they provide, we can remove all or part of the palatal portion of your upper denture. If you are not comfortable with removable dentures, mini dental implants can be used to anchor cemented crowns and bridges, giving you a second chance at "real" teeth. Losing teeth results in many problems with chewing, speaking, and smiling, but did you know that it can also cause loss of bone? This bone loss can affect your facial appearance as well. Placing mini dental implants helps preserve the bone and prevents the ravaging effects of bone loss on your appearance and function. Perhaps the greatest news is that you don't have to wait for months, or in some cases... years, to enjoy your mini dental implant supported restorations. Usually, you can use the implants the day they are placed!

The 'Mini' Implant Has Arrived
Dr. Gordon J. Christensen

"In my opinion, I find more indications for narrow-diameter implants (≈ 1.8 mm) than for standard-diameter implants (≈ 3.75 mm).

Training

Our primary focus is providing mini dental implant supported crowns, bridges, veneers and dentures that are cosmetically and functionally pleasing. Dr. Rose Magno at the Mini Dental Implant Centers of America, has invested tremendous time to become personally trained by the dentist who developed and patented many of these techniques.

Dr. Shatkin originated many of these procedures several years ago. As part of this specialized training, Dr. Rose Magno has personal and constant access to Dr. Shatkin. As well, she has an entire team of experts for advice and continuous access to developments in the techniques that are best suited for your specific dental situation.

Dental Staff and Laboratory

F.I.R.S.T. Laboratory, LLC is the largest provider of mini dental implant restorations in the world. The Mini Dental Implant Centers of America has partnered with F.I.R.S.T. Laboratory, LLC to bring you the most beautiful dental implant restorations available.

Our caring staff is also specially trained to assist with your mini implant treatment. Because this is the focus of our practice, our staff members are experienced with all aspects of implant treatment, and often continue their education through our special doctor and staff training programs.

Equipment and Facility

This state of the art facility contains the most modern equipment available to deliver these specialized services, and meets or exceeds the highest quality standards of safety and infection control for both dental offices and outpatient surgical facilities.

Proven Results

Hundreds of thousands of mini dental implants have been placed since the late 1970's and studies demonstrate an over-all success rate of greater than 95% when provided by properly trained and experienced dentists.

Ask Dr. Rose Magno at the Mini Dental Implant Centers of America if you are a good candidate for these procedures.

Advantages

- Simple, gentle, non-surgical approach
- Immediate use in most cases
- Restored confidence with speaking and eating
- Restored confidence in the attractiveness of your smile
- Cost-effectiveness—usually half the cost of conventional implants
- Anchoring for dentures or cemented crowns & bridges
- Preservation of bone and therefore the structure of your face & mouth

Affordable Comfort

With all the advantages of mini implants and these patented techniques, you might think that the cost would far exceed that of conventional implants; in fact, they are typically less than half the cost. Be sure to ask about financing options that make your payment not only affordable but convenient as well.
